Recommendations to enhance radiation protection of patients and medical workers

- Establish an open, interconnected and organised collection of image and dose data at the European level
- Develop tools that facilitate dose and image data collection in the clinics
- Use models to estimate total doses delivered to individual patients in the clinics
- Foster collaboration between medical specialities, research and patients
- Support long-term epidemiological studies at the European level
- Provide regular training programmes for medical workers
- Promote the use of artificial intelligence for personalised medicine
- Optimise the benefit to risk ratio of radiation-based medical procedures
